FOR TEACHERS OF MULTILINGUAL LEARNERS

Keep the thinking. Support the language.

When lesson language gets in the way, start with one focused support. This planning resource helps teachers tailor a prompt for their school-approved AI tool, then review and adapt the draft for teaching.

Reading · Vocabulary · Visuals · Speaking · Writing · Planning · Lesson slides

1. Choose a support. Make the prompt yours.

Grade level	Subject
Grade 4	Science

Live word-bank prompt, cropped. Grade 4 and Science entered as an example.

FROM A CLASSROOM NEED TO A RESOURCE YOU CAN USE

Notice a need — What language does the task require?

→

Choose support — Unsure? Find Language Demands.

→

Customize — Add the lesson details you know.

→

Use your AI — Paste the prompt and lesson material.

→

Review + teach — Check accuracy, fit and student thinking.

2. Explore an example before creating your resource.

Vocabulary	Kid-friendly meaning	Image
Weathering	The breaking down of rocks into smaller pieces.	

Site example, cropped to one row and three columns. The full table includes a home-language column.

CLASSROOM IDEA · GRADE 4 SCIENCE

Before a lesson on weathering and erosion, choose Build a Visual Word Bank. Use your AI tool to draft it, check the meanings and images, then ask pairs to explain how rocks break down and the pieces move, using the bank as a reference.

Try one support with your next lesson.

No Toolkit account needed. Bring your school-approved AI tool.

An early-stage toolkit. Teacher feedback welcome.
