Scaffold

Thoughtful support. Teacher judgment.

FOR TEACHERS

PRACTICAL SUPPORT FOR MULTILINGUAL LEARNERS

Same lesson. More learners. Brighter possibilities.

SCAFFOLD PREPARES

- Learning goal
- Language objective
- Sentence frames
- Teacher moves

For teachers planning language support for multilingual learners. Scaffold combines lesson demands with your observations to suggest an AI-generated plan you can review and adapt.

Plan from notes or pasted lesson text. PDF upload and extraction remain a concept.

THE SCAFFOLD WORKFLOW

01 YOU NOTICE

Name the task, what students can do, and where they get stuck.

→

02 SCAFFOLD SUGGESTS

Review a teacher move and language support linked to that barrier.

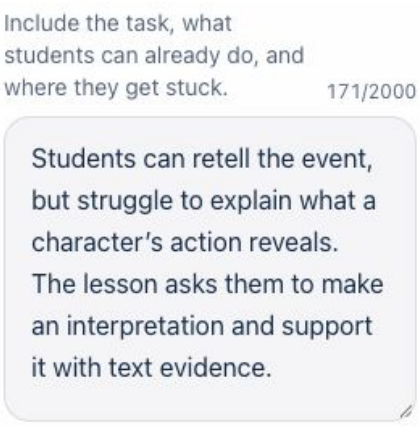

→

03 YOU DECIDE

Use partner talk or student work to fade, change, or increase support.

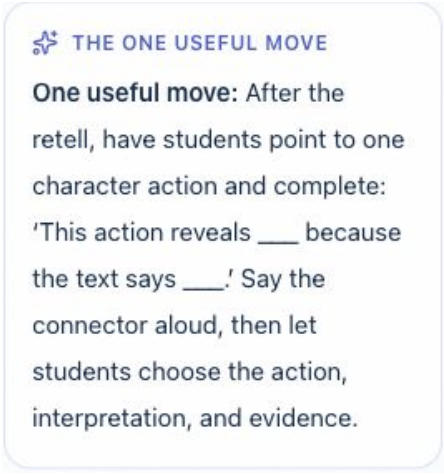

A GRADE 4 READING EXAMPLE

Your classroom evidence

Planning input: fictional teacher notes (cropped).

One useful teacher move

Prepared public sample (cropped); no curriculum citation.

STUDENTS STILL OWN

The goal stays the same: interpret a character action and justify it with evidence. Students choose the action, interpretation, and supporting detail.

WATCH, THEN ADJUST

Fade the full frame when students independently connect an action, an interpretation, and relevant evidence in partner talk. Keep a short prompt if they still need a cue.

Teacher judgment stays central. Review and adapt every suggestion while preserving the lesson's intellectual goal.

Bring one lesson you're teaching next.

Open the planner with one classroom moment. Rough notes are enough.
